

(b) Amendments to the Claims:

The following is a complete listing of the claims, reflects all changes currently being made thereto, and replaces all earlier versions and listings:

1. - 15. (Canceled).

16. (Currently Amended): A process for producing a structure having holes, comprising the steps of:

providing a first member having a patterning layer comprised of a material soluble during anodization on a layer to be anodized an aluminum alkoxide;

forming a protrusion-depression structure on the patterning layer by impressing a second member having protrusions on the patterning layer, wherein the depression of the protrusion-depression structure contains a residual film of the aluminum alkoxide material soluble during anodization; and

anodizing a substrate by immersing the substrate in an anodization solution, retaining the patterning layer in the depression of the protrusion-depression structure, to form holes on the substrate, starting from the depression side, wherein the residual film is removed during anodization without conducting an etching step thereafter.

17. (Currently Amended): The process according to claim 16, wherein the patterning layer consists of aluminum alkoxide has a material having a less strength than the second member.

18. (Cancelled):

19. (Previously Presented): The process according to claim 16, wherein the height of the protrusions of the second member is larger than the thickness of the patterning layer.

20. (Previously Presented): A process for producing a functional structure comprising a step of filling a functional material into the holes formed in the process set forth in claim 16.

21. (Previously Presented): A process for producing a magnetic recording medium, wherein the functional material set forth in claim 20 is a magnetic material.
